### 2R-6S Series

H ST

### Description

Gas discharge tubes (GDT) use noble gasses enclosed in ceramic tubes to provide an alternate circuit path for voltage spikes. The ceramic envelope and with nickel connectors allow for high loads. 2R-6S Gas Discharge Tubes (GDT) series has a surge rating of 5kA, 8/20µs.Offered in a Squared Surface Mount package, which helps to make pick and place on PCB process easier.

This GDT series is perfectly suited for broadband equipment applications. The GDT's low off-state capacitance is compatible with high bandwidth applications and this capacitance loading value does not vary if the voltage across the GDT changes.

2R-6S Gas Discharge Tube (GDT) series are specifically designed for protection of electrical, multimedia, and communication equipment against over voltage transients in surface mount assembly applications.

#### Features

- I Excellent response to fast rising transients
- I Stable breakdown voltage
- I GHz working frequency
- I 8/20µs Impulse current capability:5KA
- I Surface Mount package
- I Non-Radioactive
- I Ultra Low capacitance (<1.0pF)
- I Size: 4.2mm\*6.2mm\*6.2mm
- Storage and operational temperature: -40~+90°C

#### Agency Approvals

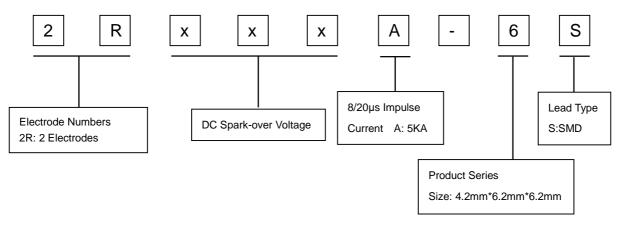

Agency	Standards	Certificate No.		
۶L°	UL497B	E465335		

### Applications

- I CATV equipment
- I Antennas
- I RS 485
- I Telecom Base Station
- I Power Supply AC Main
- I EV power Charging
- I Inverter/Variable
- I Frequency Drivers (VFDs)
- I IEEE 802.3 compliant Ethernet interfaces

- I Broad Band equipment
- I xDSL, ADSL, ADSL2, VDSL, and VDSL2
- I Medical Electronics
- I Test Equipment
- I General Telecom Equipment
- I Renewable Energy

### Soldering Parameters - Reflow Soldering (Surface Mount Devices)

Reflow Cond	ition	Pb - Free assembly		
	-Temperature Min (T <sub>s(min)</sub> )	150°C		
Preheat	-Temperature Max (T <sub>s(max)</sub> )	200°C		
	- Time (min to max) ( $t_s$ )	60 -180 Seconds		
Average ram to peak	p up rate ( Liquids Temp $T_L$ )	3°C/second max		
T <sub>S(max)</sub> to TL -	Ramp-up Rate	5°C/second max		
Reflow	- Temperature (T <sub>L</sub> ) (Liquids)	217°C		
	- Time (min to max) ( $t_s$ )	60 -150 Seconds		
Peak Temper	ature (T <sub>P</sub> )	260 +0/-5°C		
Time within 5 Temperature	i°C of actual peak (t <sub>p</sub> )	10 - 30 Seconds		

Surface mounted components (SMD) may exhibit a temporary increase in the DC spark-over voltage after the solder reflow process. The components will recover within 24 hours. There is no quality defect nor change in protection levels during the temporary change in DC spark-over voltage.

### **Terms and definitions**

NO.	Item	Definitions			
	Gas discharge	A gap, or several gaps, in an enclosed discharge medium, other than air at atmospheric pressure,			
1	1 tube(GDT)	designed to protect apparatus or personnel, or both, from high transient voltages. Also referred to as			
		"gas tube surge arrester".			
2	DC Spark-over Voltage	The voltage at which the gas discharge tube sparks over with slowly increasing d.c. voltage.			
3	Impulse Spark-over	The highest voltage which appears across the terminals of a gas discharge tube in the period between			
	Voltage	the application of an impulse of given wave-shape and the time when current begins to flow.			
5	Arc voltage	Voltage drop across the GDT during arc current flow.			
6	Glow voltage	Peak value of voltage drop across the GDT when a glow current is flowing.			
	Impulse discharge				
7	current	Current impulse with a nominal virtual front time of 8 $\mu s$ and a nominal time to half-value of 20 $\mu s.$			
	8/20µs				
8	Alternating	The rms value of an approximately sinusoidal alternating current passing through the gas discharge			
Ŭ	Discharge Current	tube.			
9	Insulation	Insulation resistance shall be measured from each terminal to every other terminal of the GDT. The test			
3	Resistance	is performed with DC50V when normal spark-over Voltage 70~150V, others with DC100V.			
10	Capacitance	The capacitance shall be measured once at 1 MHz between all terminals unless otherwise specified.

### 2R-6S Series

### **Cautions and warnings**

RLILÆN

- I Do not operate surge arresters in power supply networks, whose maximum operating voltage exceeds the minimum spark-over voltage of the surge arresters.
- I Surge arresters may become hot in the event of longer periods of current stress (burn risk). In the event of overload the connectors may fail or the component may be destroyed.
- I Surge arresters must be handled with care and must not be dropped.
- I Do not continue to use damaged surge arresters.
- I The shown SMD pad dimensions represent a safe way to mount the arrester and are a recommendation of the manufacturer. During the reflow process it must be assured that no solder material reduces the insulation distance between the pads below the arrester.
- I SMD surge arresters should be soldered within 24 month after shipment.
