#### Gas Discharge Tubes(GDT)

#### **3RB-5S Series**

#### Description

Gas discharge tubes (GDT) use noble gasses enclosed in ceramic tubes to provide an alternate circuit path for voltage spikes. The ceramic envelope and with nickel connectors allow for high loads. 3RB-5S Gas Discharge Tubes (GDT) series has a surge rating of 10kA, 8/20µs.Offered in a Squared Surface Mount package, which helps to make pick and place on PCB process easier.

This GDT series is perfectly suited for broadband equipment applications. The GDT's low off-state capacitance is compatible with high bandwidth applications and this capacitance loading value does not vary if the voltage across the GDT changes.

3RB-5S Gas Discharge Tube (GDT) series are specifically designed for protection of electrical, multimedia, and communication equipment against over voltage transients in surface mount assembly applications.

#### Features

- I Excellent response to fast rising transients
- I Stable breakdown voltage
- I GHz working frequency
- I 8/20µs Impulse current capability: 10KA
- I Surface Mount package
- I Non-Radioactive
- I Ultra Low capacitance (<1pF)
- I High insulation resistance
- I Size: 5mm\*5mm\*7.5mm
- I Storage and operational temperature: -40~+90°C

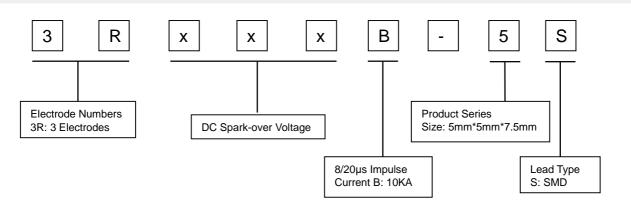

#### **Agency Approvals**

Agency	Standards	Certificate No.		
<b>Я</b> ]	UL497B	E465335		

#### Applications

- I Communication
- equipment
- I CATV equipment
- I Data lines
- I Power supplies
- I Telecom SLIC protection
- I Broadband equipment
- I ADSL equipment, including ADSL2+
- I XDSL equipment
- I Satellite and CATV equipment
- I Test equipment
- I Consumer electronics

Pre Heat	-Temperature Max (T <sub>s(max)</sub> )	200°C		
	- Time (min to max) ( $t_s$ )	60 -180 Seconds		
Average ra T <sub>L</sub> ) to peal	amp up rate ( Liquids Temp k	3°C/second max		
T <sub>S(max)</sub> to T	L - Ramp-up Rate	5°C/second max		
Reflow	- Temperature (T <sub>L</sub> ) (Liquids)	217°C		
	- Time (min to max) ( $t_s$ )	60 -150 Seconds		
Peak Tem	perature (T <sub>P</sub> )	260 +0/-5°C		
Time with Temperate	in 5°C of actual peak ure (t <sub>p</sub> )	10 - 30 Seconds		
Ramp-dov	vn Rate	6°C/second max		
Time 25°C	to peak Temperature (T <sub>P</sub> )	8 minutes Max		
Do not ex	ceed	260°C		

Surface mounted components (SMD) may exhibit a temporary increase in the DC spark-over voltage after the solder reflow process. The components will recover within 24 hours. There is no quality defect nor change in protection levels during the temporary change in DC spark-over voltage.

#### **Terms and definitions**

NO.	ltem	Definitions		
1	Gas discharge tube(GDT)	A gap, or several gaps, in an enclosed discharge medium, other than air at atmospheric pressure, designed to protect apparatus or personnel, or both, from high transient voltages. Also referred to as "gas tube surge arrester".		
2	DC Spark-over Voltage	The voltage at which the gas discharge tube sparks over with slowly increasing d.c. voltage.		
3	Impulse Spark-over Voltage	The highest voltage which appears across the terminals of a gas discharge tube in the period between the application of an impulse of given wave-shape and the time when current begins to flow.		
5	Arc voltage	Voltage drop across the GDT during arc current flow.		
6 <b>Glow voltage</b> Peak value of voltage drop across the GDT when a glow current is flowing.		Peak value of voltage drop across the GDT when a glow current is flowing.		
7	Impulse discharge current 8/20µs	Current impulse with a nominal virtual front time of 8 $\mu s$ and a nominal time to half-value of 20 $\mu s.$		
8	Alternating Discharge Current	The rms value of an approximately sinusoidal alternating current passing through the gas discharge tube.		
9	Insulation Resistance	Insulation resistance shall be measured from each terminal to every other terminal of the GDT. The test is performed with DC50V when normal spark-over Voltage 70~150V, others with DC100V.		
10	Capacitance	The capacitance shall be measured once at 1 MHz between all terminals unless otherwise specified.

### Gas Discharge Tubes(GDT)

#### **3RB-5S Series**

#### **Cautions and warnings**

- I Do not operate surge arresters in power supply networks, whose maximum operating voltage exceeds the minimum spark-over voltage of the surge arresters.
- I Surge arresters may become hot in the event of longer periods of current stress (burn risk). In the event of overload the connectors may fail or the component may be destroyed.
- I Surge arresters must be handled with care and must not be dropped.
- I Do not continue to use damaged surge arresters.
- I The shown SMD pad dimensions represent a safe way to mount the arrester and are a recommendation of the manufacturer. During the reflow process it must be assured that no solder material reduces the insulation distance between the pads below the arrester.
- I SMD surge arresters should be soldered within 24 month after shipment.
